

Electronic Medical Records

Are your patient records stored in manner that is - inefficient
and ambiguous?

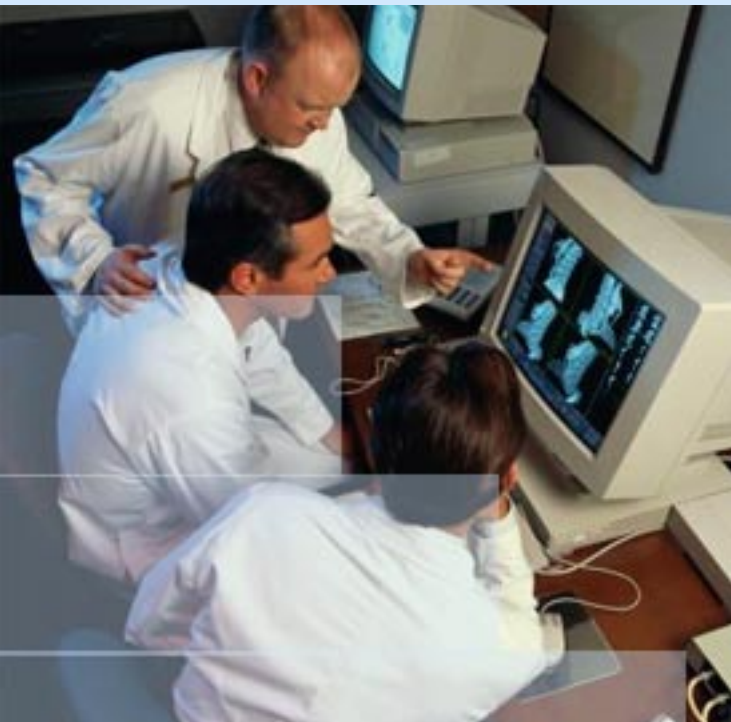

Tracking of information or Documents – Are they leading to
non-productive environment and escalation of costs?

Introduction

Transitioning to an electronic medical record system is a top priority for Healthcare Organizations because it provides doctors and employees with the necessary tools to enhance the quality and safety of the medical care they deliver to patients.

An EMR Tool provides a complete picture of a patient's medical history. Doctors and caregivers can refer all of a patient's vital statistics, test results, medications, allergies and prior health conditions -- regardless of where the information was collected with the organization.

A recent federal government report, "The Decade of Health Information Technology," issued to coincide with formation of a national private-sector consortium (the Health Information Technology Leadership Panel), estimates that if patient records were in electronic form, 10 percent of the nation's annual health care bill -- \$140 billion a year -- could be saved.

Hospitals and clinics argue that the dollar and time costs of investment are significant barriers to making the much-needed change. But those comparative investment figures seem to be asking, "What's more important, your money or your life?" And that's disturbing, because the federal report makes clear that health care IT benefits don't stop at mere cost savings, they extend into quality care and longevity.

Pradot™ Technologies

Pradot™ is an out-sourcing solutions provider for non-core competencies of health care organizations. It has over 225 highly dedicated and talented employees. Its organizational structure embraces an open style management, disciplined problem solving and decision making approach, with a flexible and conducive work environment. Pradot™ recognizes its workforce as an asset and training as an investment.

Pradot™ is well positioned to take advantage of out-sourcing of non-core competent activities for global companies with an established out-sourcing infrastructure and corporate strategy.

Outsourcing has proved to be highly cost-effective, efficient and has helped to deliver products to markets faster than ever before.

This scenario implies that companies need to forge partnerships with outsourcing vendors that have the resources to deliver the highest level of quality, consistently, cost-effectively and in the shortest possible time frame, thereby substantially increasing the clients' competitiveness by helping them deliver products to markets quicker than ever before.

Product Features

Pradot™ offers a simple and user-friendly solution for Electronic Medical Records that contain the following features:

- Web based
 - Electronic Medical Records and
 - Clinic Automation System
- Full Service System – You use, we keep it running
- HIPAA Compliant
- Enhances Provider efficiency and Patient care
- Comprehensive Treatment and Patient education material included
- Complete Billing cycle – enables seamless claims processing
- Link multi-locational clinics
- Image archiving
- Graphs of laboratory data and Patient Vital signs
- Reminders and alerts for needed patient care
- Superbills and daysheets
- Detailed Practice and Capitation Analysis
- Electronic Service requests for Procedures, Lab and other services ensures accuracy
- Online results from investigations as soon as tests are complete
- Electronic Prescription Capture
- Automate pharmacy dispensation and stock monitoring
- Financial Analysis reports

User Specific Features

Front Office

- Registration
- Service – patient history / consultation
- Appointments / Schedule
- Automatic
- Appt reminder
- Multi Doctor
- Scheduler - Intra-Office Messaging System - Inbox Easy
- Rescheduling/Cancellation
- Patient in Clinic – Continuous status monitoring
- Insurance records and pre-certification
- Multiple Questionnaires – Health, Nursing, Teaching Tools, etc.
- Diagnosis Details

Clinical - Doctors

- View comprehensive Patient record on screen – no moving files around the clinic
- Multiple user access of the same record at the same time – Conference feature
- Electronic record of consultation
- View/ edit consultation transcripts
- Communicate with transcriptionists through the system
